KARNATIK TANPURA

Installation and Release Status

Version 0.3.4 | 31 October 2026

musicloud
studio & technology

01 *Download from the official site*

Use https://karnatik.ai/downloads and sign in with your Karnatik.ai account. Choose the architecture that matches your computer. Close your DAW before installing an update.

02 *Mac: macOS 12 or later*

Apple Silicon is for M-series Macs; Intel is for Intel Macs. The 0.3.4 Mac packages are Developer ID signed and Apple notarized. Open the matching .pkg and follow the installer. AU and VST3 are installed in the standard system plug-in folders.

03 *Logic Pro*

Reopen Logic after installation and allow its plug-in scan to finish. Add a software instrument track and select AU Instruments > Musicloudstudio & Technology > Karnatik Tanpura > Stereo. If needed, use Logic Plug-in Manager to rescan this plug-in.

04 *Windows: Windows 10/11 x64*

The Windows installer installs the VST3 into the standard shared VST3 folder. It is unsigned, so Windows may show Unknown publisher or a SmartScreen warning. Confirm the source and checksum before installation. If your organization blocks unsigned software, contact its administrator. We do not provide an override for that policy.

05 *Security checks*

Download only from the official site. Do not disable Gatekeeper, Microsoft Defender, SmartScreen or antivirus software. If a signed release shows a publisher or integrity mismatch, stop and contact support. Signing identifies the publisher; it does not guarantee immediate SmartScreen reputation.

06 *After updating*

Export new WAV regions to receive the loop correction. Existing audio files remain unchanged. Keep your project tempo and time signature aligned with the exported loop.

07 *Support*

Email contact@musicloudstudio.com with OS version, DAW, architecture, plug-in version and a screenshot of the message. Never send passwords, private signing keys or recovery codes.
