

REAL SHRUTHI FOR EVERY DAW

Karnatik Tanpura

Installation Help SOP

Apple Silicon | Intel Mac | Windows

Visual steps for unidentified developer and SmartScreen warnings

Version 0.3.0 beta installation support

Download only from karnatik.ai/downloads

BEFORE YOU INSTALL

Choose the correct installer

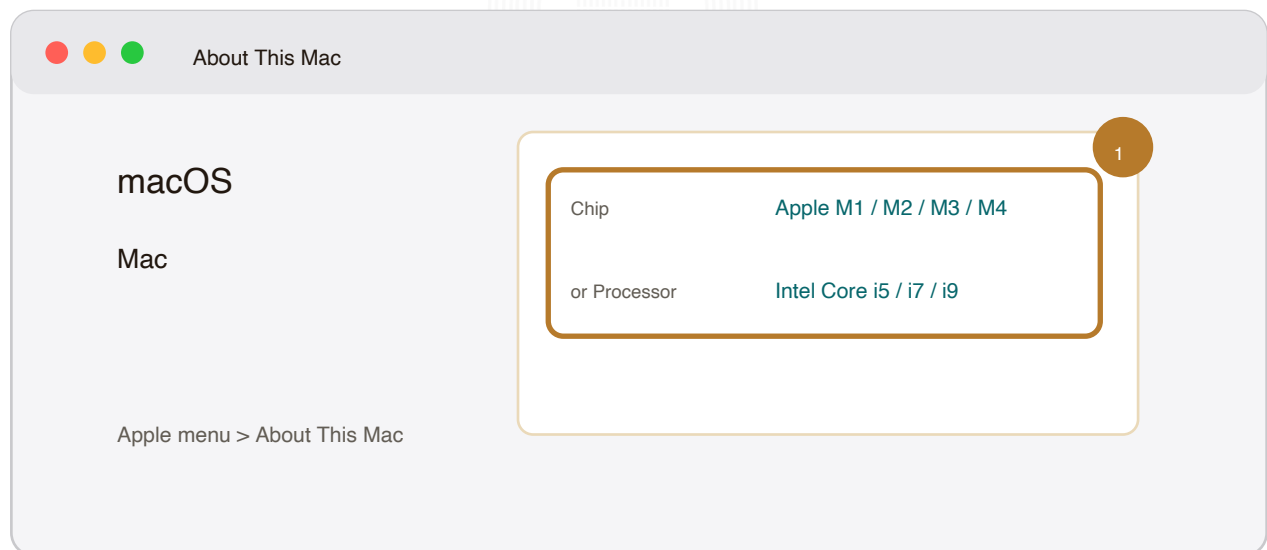

Use the package that matches your computer. The Mac recovery steps are the same after you choose the correct Apple Silicon or Intel package.

Safety first: continue only when the installer came directly from <https://karnatik.ai/downloads>. Do not switch off Gatekeeper, Microsoft Defender, SmartScreen, or your antivirus.

YOUR COMPUTER	USE THIS INSTALLER
Mac with Apple M1, M2, M3, M4 or newer chip	Karnatik-Tanpura-0.3.0-macOS-Apple-Silicon.pkg
Mac with Intel processor	Karnatik-Tanpura-0.3.0-macOS-Intel.pkg
Windows 10/11, 64-bit	Karnatik-Tanpura-0.3.0-Windows-x64-Setup.exe

How to check your Mac chip

Choose Apple menu > About This Mac. Read the line labelled Chip or Processor.

Illustrated screen. The layout may vary slightly by macOS version.

APPLE SILICON AND INTEL MAC

Install the macOS package

Close Logic Pro, GarageBand, Ableton Live, Cubase, and any other DAW before installation.

1

Open the downloaded .pkg file

Double-click the package in Downloads. Use the Apple Silicon package for M-series Macs or the Intel package for Intel Macs.

2

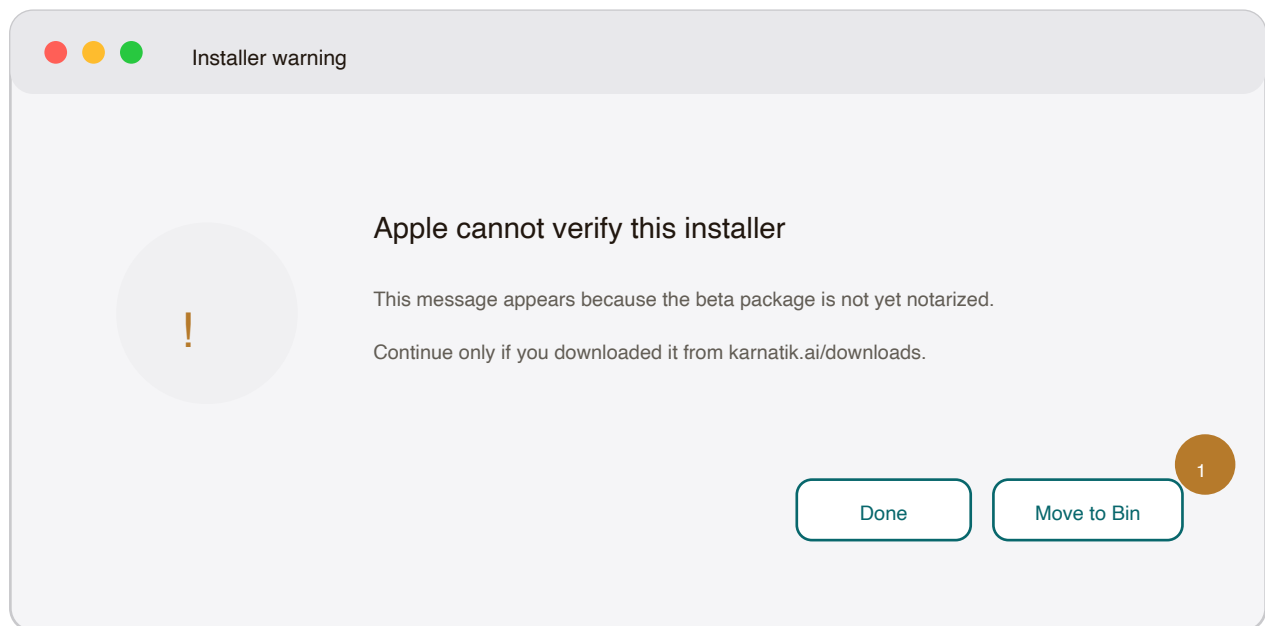

If installation opens normally

Follow the installer steps, enter your Mac password or use Touch ID, and click Install.

3

If macOS blocks the installer

Read the warning. If the file came from karnatik.ai/downloads, click Done, then follow the next page.

Stop if the message says the installer will damage your computer, or if the filename/source is different. That is not the normal beta warning.

MACOS SECURITY RECOVERY

Allow this installer once

This creates an exception for this installer. It does not disable macOS security globally.

1

Open System Settings

Choose Apple menu > System Settings.

2

Open Privacy & Security

Select Privacy & Security in the left sidebar, then scroll down to the Security section.

3

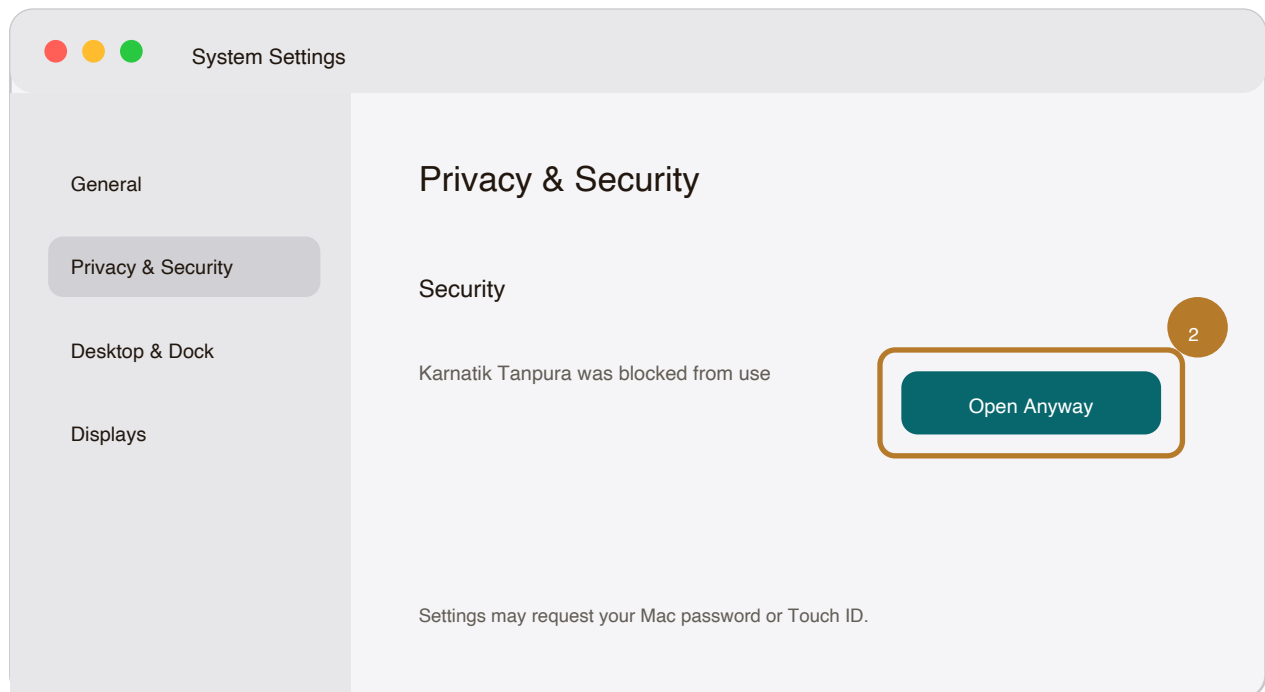

Click Open Anyway

Find the message that Karnatik Tanpura was blocked. Click Open Anyway.

4

Confirm and install

Authenticate with your Mac password or Touch ID. When the warning appears again, click Open. Complete the installer.

Illustrated screen based on current macOS Privacy & Security. Button wording may vary slightly.

WINDOWS 10/11

Pass the SmartScreen warning safely

The beta installer is not yet code-signed, so Windows can show Unknown publisher even when the download is correct.

1

Open the Windows installer

Double-click Karnatik-Tanpura-0.3.0-Windows-x64-Setup.exe in Downloads.

2

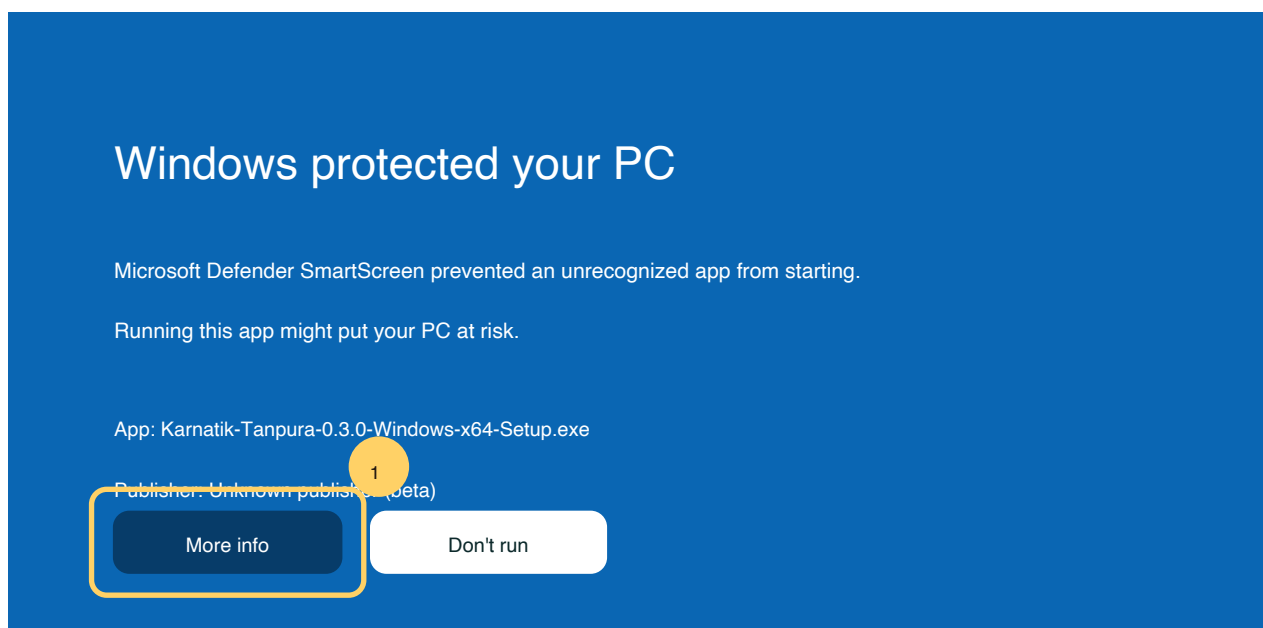

Check the filename and source

Proceed only if you downloaded this exact installer from karnatik.ai/downloads.

3

Select More info

On Windows protected your PC, click More info to reveal the application details and the Run anyway button.

Illustrated Windows SmartScreen screen. Enterprise-managed computers may not offer Run anyway.

WINDOWS 10/11

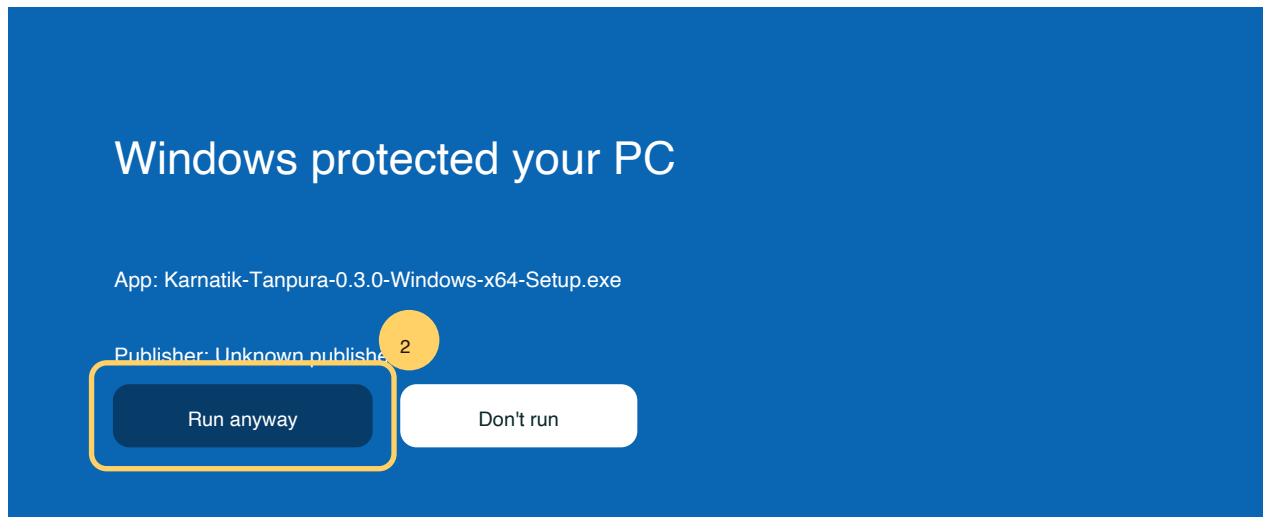

Run and complete the installer

SmartScreen performs a reputation check. The warning does not by itself mean the installer contains malware, but you must verify the source before continuing.

4

Click Run anyway

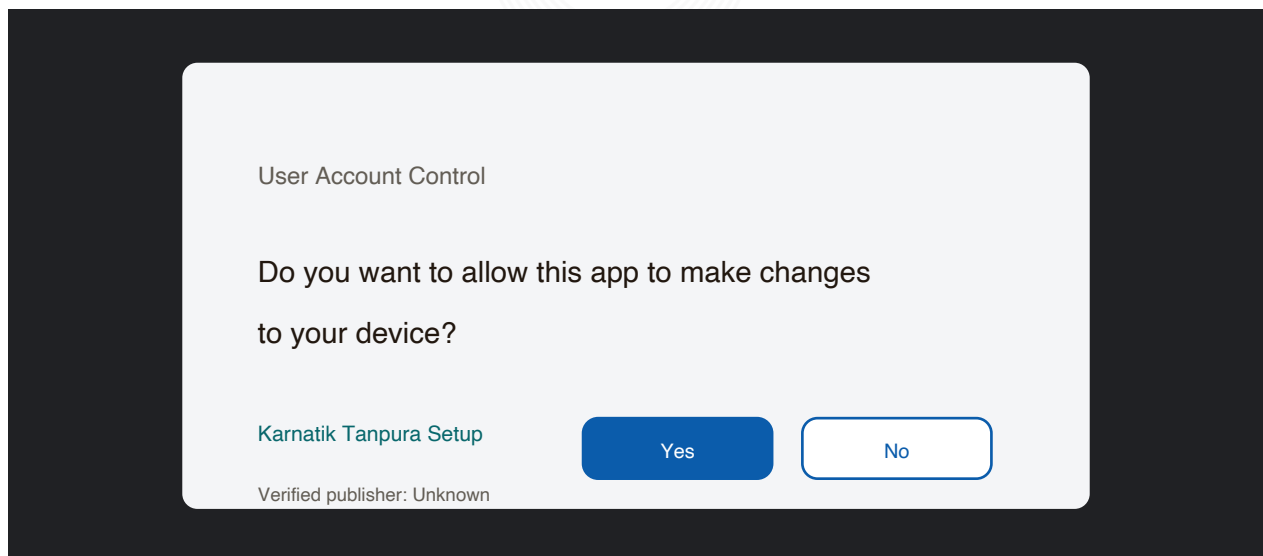

After More info expands the window, click Run anyway.

5

Approve User Account Control

Click Yes only when the app is Karnatik Tanpura Setup and you started it from the verified download.

6

Finish and restart your DAW

Complete the setup wizard, reopen the DAW, and rescan VST3 plug-ins if required.

AFTER INSTALLATION

Make the plug-in appear in your DAW

The installer adds the correct AU and/or VST3 files. A DAW restart or plug-in rescan is usually required.

DAW / FORMAT	WHERE THE PLUG-IN IS INSTALLED	WHAT TO DO
Logic Pro / GarageBand - AU	/Library/Audio/Plug-Ins/Components	Restart Logic. If missing: Logic Pro > Settings > Plug-in Manager > Reset & Rescan Selection.
Mac VST3 DAWs	/Library/Audio/Plug-Ins/VST3	Restart the DAW and run its plug-in rescan.
Windows VST3 DAWs	C:\Program Files\Common Files\VST3\Karnatik Tanpura.vst3	Restart the DAW and rescan VST3 plug-ins.

Quick DAW checklist

- Logic Pro and GarageBand use the Audio Unit (AU) version, not VST3.
- Ableton Live, Cubase, Nuendo, Studio One, FL Studio, and Reaper use the VST3 version.
- Create a software instrument track, then load Karnatik Tanpura as an instrument plug-in.
- Pro Tools is not supported in this beta because it requires an AAX build.

Logic Pro: open Logic Pro > Settings > Plug-in Manager. Select Karnatik Tanpura and click Reset & Rescan Selection if it is not listed correctly.

TROUBLESHOOTING

If the plug-in is still missing

Work through these checks in order. They solve the most common beta-installation problems.

1

Confirm the installer

Apple Silicon package for M-series Macs; Intel package for Intel Macs; Windows x64 installer for Windows 10/11.

2

Restart the DAW

Quit it completely and reopen it. If needed, restart the computer once.

3

Run a plug-in rescan

Use Logic Plug-in Manager or your DAW's VST3 rescan command.

4

Check the installed path

Use the paths shown on the previous page. The system-level Library path starts with /Library, not your user Library.

5

Check compatibility

Use a current 64-bit DAW. Pro Tools requires AAX and is not included in this beta.

Still stuck? Email ramanujan.mk@musiccloudstudio.com with: operating-system version, Mac chip or Windows version, DAW and version, exact installer filename, and a screenshot of the warning.
