KARNATIK TANPURA

Installation Help

Version 0.3.4 | 31 October 2026

Download from the official site

Visit **karnatik.ai/downloads** and sign in. Choose the installer for your computer. Close your DAW before installing an update.

Mac: macOS 12 or later

Choose Apple Silicon for M-series Macs or Intel for Intel Macs. Version 0.3.4 is Developer ID signed and Apple notarized. Open the .pkg installer. AU and VST3 are installed in standard system folders.

Logic Pro

Reopen Logic and let the plug-in scan finish. Add a software instrument track. Choose AU Instruments > Musicloudstudio & Technology > Karnatik Tanpura > Stereo. If needed, rescan in Plug-in Manager.

Windows: Windows 10/11 x64

Install the VST3 in the standard shared VST3 folder. The installer is unsigned and may show Unknown publisher or SmartScreen. Verify the source and checksum. If your organization blocks it, contact its administrator.

Security checks

Download only from **Karnatik.ai**. Never disable Gatekeeper, Defender, SmartScreen or antivirus. If the publisher or file integrity does not match, stop and contact support.

After updating

Export fresh WAV regions to use the loop correction. Existing audio files remain unchanged. Match your project tempo and time signature to the exported loop.

Support

Email **contact@musicloudstudio.com** with your OS, DAW, architecture, plug-in version and a screenshot. Never share passwords, signing keys or recovery codes.
